According to Table 4-1, the critical point is a node. According to Table 4-2, it is unstable.

11 - 18 Trajectories of systems and second-order ODEs. Critical points.

11. Damped oscillations. Solve **y'' + 2 y' + 2 y = 0**. What kind of curves are the trajectories?

17. Perturbation. The system in example 4 in section 4.3 has a center as its critical point. Replace each a_{jk} in example 4, section 4.3, by a_{jk} + b. Find values of b such that you get (a) a saddle point, (b) a stable and attractive node, (c) a stable and attractive spiral, (d) an unstable spiral, (e) an unstable node.
