Note: In this problem set, expressions in green cells match corresponding expressions in the text answers.

Clear["Global`*"]

1 - 9 Integrals involving sine and cosine Evaluate the following integrals.

$$1. \int_0^\pi \frac{2}{k - \cos\left[\theta\right]} \, \mathrm{d}\theta$$

Clear["Global`*"]

First I will search for singularities.

Reduce
$$[k - Cos[\theta] = 0, \{k, \theta\}]$$

C[1] \in Integers && $(\theta = -ArcCos[k] + 2 \pi C[1] | | \theta = ArcCos[k] + 2 \pi C[1])$

The cells both above and below show the pattern for multiples of ArcCos[k], and allow me to use simply $ArcCos[k]+2\pi$ as the root. However, looking at the interval of evaluation for the integral, only C[1]=0 will be available. For real k, this root will be on the x axis, constituting a simple pole, and that permits use of theorem 1 on p. 731.

The above mentioned theorem 1 sets forth the answer to the integral as

$$\pi$$
 in Residue $\left[\frac{2}{k-\cos[\theta]}, \{\theta, ArcCos[k]\}\right]$

$$\frac{2 i \pi}{\sqrt{1-k^2}}$$

Or,

$$\frac{2 \, \dot{\mathbf{n}} \, \pi}{\sqrt{1 - \mathbf{k}^2}} = \frac{2 \, \dot{\mathbf{n}} \, \pi}{\sqrt{\mathbf{k}^2 - 1} \, \dot{\mathbf{n}}} = \frac{2 \, \pi}{\sqrt{\mathbf{k}^2 - 1}}$$

$$3. \int_0^{2\pi} \frac{1 + \operatorname{Sin}[\theta]}{3 + \operatorname{Cos}[\theta]} \, d\theta$$

Clear["Global`*"]

Integrate
$$\left[\frac{1+\sin[\theta]}{3+\cos[\theta]}, \{\theta, 0, 2\pi\}\right]$$

$$\frac{\pi}{\sqrt{2}}$$

I tried this a long way first, involving residue, but did not get the right answer. Just by

pushing the integrate button, the right answer pops out.

5.
$$\int_0^{2\pi} \frac{\cos\left[\theta\right]^2}{5 - 4\cos\left[\theta\right]} d\theta$$

Clear["Global`*"]

Integrate
$$\left[\frac{\cos\left[\theta\right]^{2}}{5-4\cos\left[\theta\right]}, \{\theta, 0, 2\pi\}\right]$$

$$\frac{5 \pi}{12}$$

Another one matches the text answer without any preparation or application.

7.
$$\int_0^{2\pi} \frac{a}{a - \sin[\theta]} d\theta$$

Clear["Global`*"]

Integrate
$$\left[\frac{a}{a-\sin[\theta]}, \{\theta, 0, 2\pi\}\right]$$

$$2 \sqrt{\frac{a^2}{-1+a^2}} \pi = \frac{2 \sqrt{a^2}}{\sqrt{1-a^2}} \pi = \frac{-2 a \pi}{\sqrt{a^2-1}}$$

Mathematica gives an answer with reversed sign, as compared to the text answer. (Mathematica took a long think on this.) Since this is the only problem in this section where there is disagreement in answers, I will attempt to work it out the long way.

$$\int_0^{2\pi} \frac{a}{a - \sin[\theta]} d\theta = a \int_0^{2\pi} \frac{1}{a - \sin[\theta]} d\theta$$

Numbered line (2) on p. 726 has a way to modify the appearance of the denominator,

$$a - Sin[\theta] = a - \frac{1}{2i}\left(z - \frac{1}{z}\right)$$

and in the text below numbered line (2),

$$d\theta = \frac{dz}{i z}$$

Implying that

$$\int_0^2 \frac{\pi}{\mathbf{a} - \mathbf{Sin}[\theta]} d\theta = \oint_C \frac{d\mathbf{z}}{\mathbf{i} \mathbf{z} \left(\mathbf{a} - \frac{1}{2} \mathbf{i} \left(\mathbf{z} - \frac{1}{2}\right)\right)}$$

where C is the unit circle.

Operating on the denominator above,

$$\dot{n} z \left(a - \frac{1}{2 \dot{n}} \left(z - \frac{1}{z} \right) \right) = \dot{n} z a - \frac{\dot{n} z}{2 \dot{n}} z + \frac{1}{2 \dot{n}} \frac{\dot{n} z}{z} =$$

$$\dot{n} z a - \frac{z^2}{2} + \frac{1}{2} = -\frac{1}{2} \left(z^2 - 2 a \dot{n} z - 1 \right)$$

making the last integral equal to

$$-2 \oint_C \frac{dz}{z^2 - 2 \text{ a is } z - 1}$$

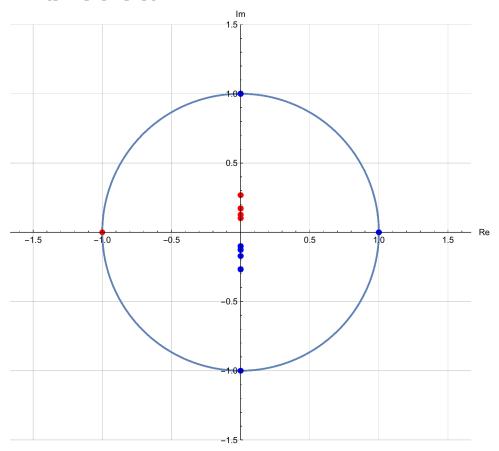

The denominator is a quadratic equation, with a=1, b=-2 a i, and c=-1. Solving,

Solve
$$[z^2 - 2 \ a \ \dot{\mathbf{z}} \ z - 1 = 0, \ z]$$
 $\{ \{ z \rightarrow \dot{\mathbf{z}} \ a - \sqrt{1 - a^2} \}, \ \{ z \rightarrow \dot{\mathbf{z}} \ a + \sqrt{1 - a^2} \} \}$

The roots will be simple poles of the problem function. A plot would be appropriate at this point.

```
p1 = ParametricPlot[\{1 \cos[t], 1 \sin[t]\}, \{t, -\pi, \pi\},
                                   ImageSize \rightarrow 500, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{-1.5, \ 1.5\}, \ AxesLabel \rightarrow \{"Re", "Im"\}, \ PlotRange \rightarrow \{"Re", "Im"\}
                                   PlotStyle → {Thickness[0.004]}, GridLines -> Automatic];
p1p = ListPlot \left[ Table \left[ \left\{ Re \left[ i a - \sqrt{1 - a^2} \right] , Im \left[ i a - \sqrt{1 - a^2} \right] \right\}, \left\{ a, -5, 5 \right\} \right],
                                 PlotStyle → {Red}];
p2p = ListPlot[Table[{Re[ia + \sqrt{1 - a^2}], Im[ia + \sqrt{1 - a^2}]}, {a, -5, 5}],
                                  PlotStyle → {Blue}];
```

There appear to be 8 points inside the unit circle. For the first table below (red points), these are n=2,3,4,5.

A series like the below may not be too smart, but it is possible.

Series
$$\left[\frac{a}{a-\sin[\theta]}, \{a, 5-2\sqrt{6}, 4\}\right]$$

Which I take to mean that I could examine residues in terms of a if I wanted to.

Residue
$$\left[\frac{a}{a-\sin\left[\theta\right]}, \left\{a, 5-2\sqrt{6}\right\}\right]$$

Residue
$$\left[\frac{a}{a-\sin\left[\theta\right]}, \left\{a, 4-2\sqrt{6}\right\}\right]$$

Residue
$$\left[\frac{a}{a-\sin[\theta]}, \{a, 3-2\sqrt{2}\}\right]$$

Residue
$$\left[\frac{a}{a-\sin[\theta]}, \left\{a, 2-\sqrt{3}\right\}\right]$$

0

The cells above are probably an abuse of the Residue function. In any case, all are zero. Next are the blue points, n=-5,-4,-3,-2.

$$\begin{split} & \text{TableForm} \big[\text{Table} \big[\big\{ \text{a, N} \big[\text{Re} \big[\dot{\text{i}} \, \text{a} + \sqrt{1 - \text{a}^2} \, \big] \big] \, , \, \text{N} \big[\text{Im} \big[\dot{\text{i}} \, \text{a} + \sqrt{1 - \text{a}^2} \, \big] \big] \, , \\ & \text{Re} \big[\dot{\text{i}} \, \text{a} + \sqrt{1 - \text{a}^2} \, \big] \, , \, \text{Im} \big[\dot{\text{i}} \, \text{a} + \sqrt{1 - \text{a}^2} \, \big] \big\} \, , \, \left\{ \text{a, -5, 5} \right\} \big] \big] \\ & -5 \quad 0. \quad -0.101021 \quad 0 \quad -5 + 2 \, \sqrt{6} \\ & -4 \quad 0. \quad -0.127017 \quad 0 \quad -4 + \sqrt{15} \\ & -3 \quad 0. \quad -0.171573 \quad 0 \quad -3 + 2 \, \sqrt{2} \\ & -2 \quad 0. \quad -0.267949 \quad 0 \quad -2 + \sqrt{3} \\ & -1 \quad 0. \quad -1. \quad 0 \quad -1 \\ & 0 \quad 1. \quad 0. \quad 1 \quad 0 \\ & 1 \quad 0. \quad 1. \quad 0 \quad 1 \\ & 2 \quad 0. \quad 3.73205 \quad 0 \quad 2 + \sqrt{3} \\ & 3 \quad 0. \quad 5.82843 \quad 0 \quad 3 + 2 \, \sqrt{2} \\ & 4 \quad 0. \quad 7.87298 \quad 0 \quad 4 + \sqrt{15} \\ & 5 \quad 0. \quad 9.89898 \quad 0 \quad 5 + 2 \, \sqrt{6} \\ & \text{Residue} \big[\frac{\text{a}}{\text{a} - \sin{[\theta]}} \, , \, \big\{ \text{a, -5 + 2} \, \sqrt{6} \, \big\} \big] \\ \end{split}$$

Residue
$$\left[\frac{a}{a-\sin[\theta]}, \left\{a, -4+\sqrt{15}\right\}\right]$$

0

Residue $\left[\frac{a}{a-\sin[\theta]}, \left\{a, -3+2\sqrt{2}\right\}\right]$

0

Residue $\left[\frac{a}{a-\sin[\theta]}, \left\{a, -2+\sqrt{3}\right\}\right]$

The residues of all the blue points also equal zero. What has been accomplished, at least, is to find eight values of a which, when inserted into the root formula, produce roots inside the unit circle. So returning to the problem function, I can ask for a table of a values, like so

TableForm[Table[{a, Integrate}
$$\left[\frac{a}{a-\sin[\theta]}, \{\theta, 0, 2\pi\}\right]$$
}, $\left\{a, \{-5, -4, -3, -2, 2, 3, 4, 5\}\right\}$] $-5 \frac{5\pi}{\sqrt{6}}$ $-4 \frac{8\pi}{\sqrt{15}}$ $-3 \frac{3\pi}{\sqrt{2}}$ $-2 \frac{4\pi}{\sqrt{3}}$ $2 \frac{4\pi}{\sqrt{3}}$ $3 \frac{3\pi}{\sqrt{2}}$ $4 \frac{8\pi}{\sqrt{15}}$ $5 \frac{5\pi}{\sqrt{6}}$

All of the resulting values conform to the text answer, $\frac{2 \text{ a } \pi}{\sqrt{\text{a}^2-1}}$, and these test cases carry a positive sign. Maybe this suggests that *Mathematica*'s answer was in error. In any case it is puzzling that no minus sign is generated when evaluating integer tokens, but a minus sign is generated when evaluating symbolic tokens. What if the integral is presented in a different way?

$$\begin{split} & \text{Integrate} \Big[\, \frac{\mathbf{a}}{\mathbf{a} - \text{Sin} \, [\theta]} \,, \, \, \{\theta, \, 0 \,, \, 2 \, \pi\} \,, \, \text{Assumptions} \to \mathbf{a} \in \, \text{Integers} \Big] \\ & \text{ConditionalExpression} \Big[\, \frac{2 \, \mathbf{a} \, \pi \, \text{Sign} \, [\mathbf{a}]}{\sqrt{-1 + \mathbf{a}^2}} \,, \\ & \text{Im} [\text{ArcSin} \, [\mathbf{a}]] \neq 0 \, \, | \, | \, \text{Re} [\text{ArcSin} \, [\mathbf{a}]] > \pi \, \, | \, | \, \pi + \text{Re} [\text{ArcSin} \, [\mathbf{a}]] < 0 \Big] \end{split}$$

The numerator of the conditional expression is structured to remain positive. This could be used as a definitive result, but I'll continue, next with a try at splitting up the integral into two pieces.

Integrate
$$\left[\frac{a}{a-\sin\left[\theta\right]}, \{\theta, 0, 2\pi\}, Assumptions \rightarrow -5 \le a \le -2\right]$$

$$-\frac{2a\pi}{\sqrt{-1+a^2}}$$

The above cell agrees with the test results for specific negative values of a.

Integrate
$$\left[\frac{a}{a-\sin{[\theta]}}, \{\theta, 0, 2\pi\}, Assumptions \rightarrow 2 \le a \le 5\right]$$

$$\frac{2 a \pi}{\sqrt{-1+a^2}}$$

The above cell agrees with the test results for specific positive values of a. At this point it looks like Mathematica may have a better adapted solution, whereas the text answer may fail on blue points. (Checking again, I cannot see that negative values of a are prohibited.) The case may be better defined, but it is still a case of disagreement.

9.
$$\int_0^{2\pi} \frac{\cos\left[\theta\right]}{13 - 12\cos\left[2\theta\right]} d\theta$$

Clear["Global`*"]

Integrate
$$\left[\frac{\cos[\theta]}{13-12\cos[2\theta]}, \{\theta, 0, 2\pi\}\right]$$

0

10 - 22 Improper integrals: Infinite interval of integration Evaluate the following integrals.

11.
$$\int_{-\infty}^{\infty} \frac{1}{\left(1+x^2\right)^2} \, \mathrm{d}x$$

Clear["Global`*"]

Integrate
$$\left[\frac{1}{\left(1+x^2\right)^2}, \{x, -\infty, \infty\}\right]$$

2

13.
$$\int_{-\infty}^{\infty} \frac{x}{\left(1+x^2\right)\left(x^2+4\right)} \, \mathrm{d}x$$

Clear["Global`*"]

Integrate $\left[\frac{x}{(1+x^2)(x^2+4)}, \{x, -\infty, \infty\}\right]$

15.
$$\int_{-\infty}^{\infty} \frac{x^2}{x^6 + 1} \, \mathrm{d}x$$

Clear["Global`*"]

Integrate
$$\left[\frac{x^2}{x^6+1}, \{x, -\infty, \infty\}\right]$$

17.
$$\int_{-\infty}^{\infty} \frac{\sin[3x]}{x^4 + 1} dx$$

Clear["Global`*"]

$$\int_{-\infty}^{\infty} \frac{\sin[3x]}{x^4+1} \, dx$$

0

$$19. \int_{-\infty}^{\infty} \frac{1}{x^4 - 1} \, \mathrm{d}x$$

Clear["Global`*"]

Integrate $\left[\frac{1}{x^4-1}, \{x, -\infty, \infty\}, \text{ Principal Value} \rightarrow \text{True}\right]$

$$-\frac{\pi}{2}$$

In this problem, I got a non-converge warning until I added the request for principal value.

21.
$$\int_{-\infty}^{\infty} \frac{\sin[x]}{(x-1)(x^2+4)} dx$$

Clear["Global`*"]

Integrate
$$\left[\frac{\sin[x]}{(x-1)(x^2+4)}, \{x, -\infty, \infty\}, \text{ PrincipalValue} \rightarrow \text{True}\right]$$

$$\frac{1}{5}\pi\left(-\frac{1}{e^2}+\cos\left[1\right]\right)$$

In this problem, I got a non-converge warning until I added the request for principal value.

23 - 26 Improper integrals: Poles on the real axis Find the Cauchy principal value.

$$23. \int_{-\infty}^{\infty} \frac{1}{x^4 - 1} \, \mathrm{d}x$$

Clear["Global`*"]

Integrate
$$\left[\frac{1}{x^4-1}, \{x, -\infty, \infty\}, Principal Value \rightarrow True\right]$$

$$-\frac{\pi}{2}$$

$$25. \int_{-\infty}^{\infty} \frac{x+5}{x^3-x} \, \mathrm{d}x$$

Clear["Global`*"]

Integrate
$$\left[\frac{x+5}{x^3-x}, \{x, -\infty, \infty\}, Principal Value \rightarrow True\right]$$

All of the green cells in this section contain expressions which agree with the text answers.
