1 - 16 Eigenvalues, eigenvectors

Find the eigenvalues. Find the corresponding eigenvectors. Use the given λ or factor in problems 11 and 15.

1.
$$\begin{pmatrix} 3.0 & 0 \\ 0 & -0.6 \end{pmatrix}$$

```
Clear["Global`*"]
aA = \begin{pmatrix} 3.0 & 0 \\ 0 & -0.6 \end{pmatrix}
\{\{3., 0\}, \{0, -0.6\}\}
e1 = \{\{\lambda_1, \lambda_2\}, \{v1, v2\}\} = Eigensystem[aA]
  \{\{3., -0.6\}, \{\{-1., 0.\}, \{0., -1.\}\}\}
```

Above: The eigenvalues match the text. The eigenvectors do not. If my checking process is accurate, Mathematica's eigenvectors fare better than the text's.

```
aA.v1 = \lambda_1 v1
True
aA.v2 = \lambda_2 v2
True
aA.v1 = 3 \{1, 0\}
False
aA.v2 = -0.6 \{0, 1\}
 3. \left(\begin{array}{cc} 5 & -2 \\ 9 & -6 \end{array}\right)
```

$$3. \quad \left(\begin{array}{cc} 5 & -2 \\ 9 & -6 \end{array}\right)$$

```
Clear["Global`*"]
aA = \begin{pmatrix} 5 & -2 \\ 9 & -6 \end{pmatrix}
\{\{5, -2\}, \{9, -6\}\}
e1 = {vals, vecs} = Eigensystem[aA]
  \{\{-4, 3\}, \{\{2, 9\}, \{1, 1\}\}\}\
```

Above: Both eigenvalues and eigenvectors match the text.

```
e2 = aA.vecs[[1]] == vals[[1]] vecs[[1]]
True
e3 = aA.vecs[[2]] == vals[[2]] vecs[[2]]
```

$$5 \cdot \begin{pmatrix} 0 & 3 \\ -3 & 0 \end{pmatrix}$$

Clear["Global`*"] $aA = \begin{pmatrix} 0 & 3 \\ -3 & 0 \end{pmatrix}$ $\{\{0, 3\}, \{-3, 0\}\}$ e1 = {vals, vecs} = Eigensystem[aA] $\{\{3\,\dot{n},\,-3\,\dot{n}\},\,\{\{-\dot{n},\,1\},\,\{\dot{n},\,1\}\}\}$

Above: The eigenvalues match the text, but the eigenvector entries are flipped. Mathematica's eigenvectors show better than the text's when tested.

```
e2 = aA.vecs[[1]] == vals[[1]] vecs[[1]]
True
e3 = aA.vecs[[2]] == vals[[2]] vecs[[2]]
True
e4 = aA.vecs[[1]] = vals[[1]] \{\{1, -i\}\}
False
e5 = aA.vecs[[2]] == vals[[2]] {{1, i}}}
False
```

7.
$$\begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix}$$

```
Clear["Global`*"]
aA = \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix}
{{0, 1}, {0, 0}}
e1 = {vals, vecs} = Eigensystem[aA]
  \{\{0, 0\}, \{\{1, 0\}, \{0, 0\}\}\}\
```

Above: the eigenvalues match the text. The text does not mention the null eigenvector,

leaving me to suppose it means to have the first one used twice. However, the null vector is seen to succeed in testing below.

```
e2 = aA.vecs[[1]] == vals[[1]] vecs[[1]]
True
e3 = aA.vecs[[2]] == vals[[2]] vecs[[2]]
True
Clear["Global`*"]
aA = \begin{pmatrix} 0.8 & -0.6 \\ 0.6 & 0.8 \end{pmatrix}
\{\{0.8, -0.6\}, \{0.6, 0.8\}\}
e1 = {vals, vecs} = Eigensystem[aA]
 \{\{0.8 + 0.6 i, 0.8 - 0.6 i\},\
   \{\{0.\,\,-\,0.707107\,\,\dot{\mathtt{n}}\,,\,\,-0.707107\,\,+\,0.\,\,\dot{\mathtt{n}}\}\,,\,\,\{0.\,\,+\,0.707107\,\,\dot{\mathtt{n}}\,,\,\,-0.707107\,\,+\,0.\,\,\dot{\mathtt{n}}\}\}\}
```

Above: The eigenvalues match the text, but the eigenvectors do not.

```
e2 = aA.vecs[[2]] == vals[[2]] vecs[[2]]
True
e3 = aA.vecs[[1]] == vals[[1]] vecs[[1]]
True
```

To allow the greatest opportunity for success, I try using both **Transpose** and ConjugateTranspose.

```
\{\{1, \dot{\mathbf{1}}\}\}^{\dagger}
\{\{1\}, \{-i\}\}
\{\{1, \dot{\mathbf{1}}\}\}^{\mathsf{T}}
\{\{1\}, \{i\}\}
```

The text's eigenvector will not play with double curlies, so I took out one set.

```
e4 = aA.vecs[[2]] = vals[[2]] \{1, -i\}
False
e4 = aA.vecs[[2]] == vals[[2]] {1, i}
False
```

Above: Mathematica's eigenvectors look better when tested than those of the text.

11.
$$\begin{pmatrix} 6 & 2 & -2 \\ 2 & 5 & 0 \\ -2 & 0 & 7 \end{pmatrix}$$
, $\lambda = 3$

For Mathematica computing three eigenvectors with eigenvalues is just as easy as doing one, so I ignore the λ provided.

 $\{\{9, 6, 3\}, \{\{-2, -1, 2\}, \{1, 2, 2\}, \{2, -2, 1\}\}\}$

Above: The eigenvalues match the text, but one eigenvector does not.

```
e3 = aA.vecs[[1]] == vals[[1]] vecs[[1]]
True
e4 = aA.vecs[[2]] == vals[[2]] vecs[[2]]
True
e5 = aA.vecs[[3]] == vals[[3]] vecs[[3]]
True
{{2, 1, -2}}<sup>†</sup>
{{2}, {1}, {-2}}
{{2, 1, -2}}<sup>†</sup>
```

```
e9 = aA.vecs[[1]] == vals[[1]] {2, 1, -2}
False
```

Above: Mathematica's eigenvectors check out, but the one disagreeable one in the text answer does not check.

13.
$$\begin{pmatrix} 13 & 5 & 2 \\ 2 & 7 & -8 \\ 5 & 4 & 7 \end{pmatrix}$$

Clear["Global`*"]

$$aA = \begin{pmatrix} 13 & 5 & 2 \\ 2 & 7 & -8 \\ 5 & 4 & 7 \end{pmatrix}$$

$$\{\{13, 5, 2\}, \{2, 7, -8\}, \{5, 4, 7\}\}$$

$$e1 = \{vals, vecs\} = Eigensystem[aA]$$

The eigenvalues and eigenvectors match the text.

15.
$$\begin{pmatrix} -1 & 0 & 12 & 0 \\ 0 & -1 & 0 & 12 \\ 0 & 0 & -1 & -4 \\ 0 & 0 & -4 & -1 \end{pmatrix}, \quad (\lambda + 1)^2$$

Clear["Global`*"]

$$aA = \begin{pmatrix} -1 & 0 & 12 & 0 \\ 0 & -1 & 0 & 12 \\ 0 & 0 & -1 & -4 \\ 0 & 0 & -4 & -1 \end{pmatrix}$$

$$\{\{-1, 0, 12, 0\}, \{0, -1, 0, 12\}, \{0, 0, -1, -4\}, \{0, 0, -4, -1\}\}$$

$$e1 = \{vals, vecs\} = Eigensystem[aA]$$

$$\{\{-5, 3, -1, -1\}, \{3, -3, 1, -1\}, \{0, 1, 0, 0\}, \{1, 0, 0, 0\}\}\}$$

Above: The eigenvalues and eigenvectors match the text answer.
