1 - 5 Components and length

Find the components of the vector \mathbf{v} with initial point P and terminal point Q. Find $|\mathbf{v}|$. Sketch $|\mathbf{v}|$. Find the unit vector \mathbf{u} in the direction of \mathbf{v} .

```
1. P: (1, 1, 0), Q: (6, 2, 0)
```

Clear["Global`*"]

Below: reposition vector tail to origin.

$$pP = \{1, 1, 0\}; qQ = \{6, 2, 0\};$$

 $vec = qQ - pP$

Below: calculate length of vector.

euc1 = Norm[vec]

$$\sqrt{26}$$

Below: find normalized version of vector.

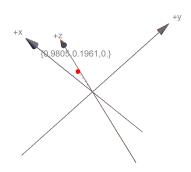

euc2 = Normalize[vec]

$$\big\{\frac{5}{\sqrt{26}},\ \frac{1}{\sqrt{26}},\ 0\big\}$$

The green cells above match the answers in the text.

Below: find normalized version in decimal form.

```
euc3 = N[Normalize[vec], 4]
{0.9806, 0.1961, 0}
pad = N[euc3 + {.3, .3, .3}, 4]
{1.28058, 0.496116, 0.3}
```

3. P: (-3.0, 4.0, -0.5), Q: (5.5, 0, 1.2)

Clear["Global`*"]

Below: reposition vector tail to origin.

$$pP = \{-3.0, 4.0, -0.5\}; qQ = \{5.5, 0, 1.2\};$$

 $vec = qQ - pP$

Below: calculate length of vector.

euc1 = Norm[vec]

9.54673

PossibleZeroQ[Chop[euc1] - Chop[$\sqrt{91.14}$]]

True

Below: find normalized version of vector.

euc2 = N[Normalize[vec], 4]

 $\{0.890357, -0.418992, 0.178071\}$

 $pad = N[euc2 + {.3, .3, .3}, 4]$ {1.19036, -0.118992, 0.478071} The green cells above match the answers in the text.

```
5. P:(0,0,0), Q:(2,1,-2)
```

Clear["Global`*"]

Below: reposition vector tail to origin.

$$pP = \{0, 0, 0\}; qQ = \{2, 1, -2\};$$

 $vec = qQ - pP$

Below: calculate length of vector.

euc1 = Norm[vec]

3

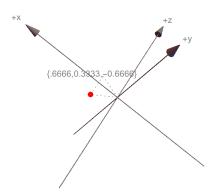

Below: find normalized version of vector.

```
euc2 = N[Chop[Normalize[vec], 10^-4]]
```

```
{0.666667, 0.333333, -0.666667}
```

```
pad = N[euc2 + {.3, .3, .3}, 4]
{0.966667, 0.633333, -0.366667}
```

The green cells above match the answers in the text (no entry for vector length).

6 - 10 Find the terminal point Q of the vector \mathbf{v} with components as given and initial point P. Find $|\mathbf{v}|$.

7.
$$\frac{1}{2}$$
, 3, $-\frac{1}{4}$; P: $\left(\frac{7}{2}, -3, \frac{3}{4}\right)$

Clear["Global`*"]

vec =
$$\left\{\frac{1}{2}, 3, -\frac{1}{4}\right\}$$
; po = $\left\{\frac{7}{2}, -3, \frac{3}{4}\right\}$;

que = vec + po

$$\{4, 0, \frac{1}{2}\}$$

e1 = Norm[vec + po]

$$\frac{\sqrt{65}}{2}$$

FullSimplify
$$\left[\frac{\sqrt{65}}{2} = \sqrt{16.25}\right]$$

True

The green cells above match the answers in the text.

Clear["Global`*"]

vec =
$$\{6, 1, -4\}$$
; po = $\{-6, -1, -4\}$; que = vec + po

$$\{0, 0, -8\}$$

e1 = Norm[que]

8

The green cells above match the answers in the text.

11 - 18 Addition, scalar multiplication

Let
$$a = \{3, 2, 0\} = 3 i + 2 j$$
; $b = \{-4, 6, 0\} = 4 i + 6 j$; $c = \{5, -1, 8\} = 5 i - j + 8 k$, $d = \{0, 0, 4\} = 4 k$

Find

11. 2 a,
$$\frac{1}{2}$$
 a, -a

Clear["Global`*"]

$$aa = \{3, 2, 0\}$$
; $bb = \{-4, 6, 0\}$; $cc = \{5, -1, 8\}$; $dd = \{0, 0, 4\}$ $\{0, 0, 4\}$

2 aa

$$\left\{\frac{3}{2}, 1, 0\right\}$$

– aa

$$\{-3, -2, 0\}$$

The green cells above match the answers in the text.

13.
$$b + c, c + b$$

bb + cc

{1, 5, 8}

cc + bb

{1, 5, 8}

7 (cc + bb)

{7, 35, 56}

7 (cc - bb)

(7 - 3) aa

{12, 8, 0}

7 aa - 3 aa

{12, 8, 0}

The green cells above match the answers in the text.

21 - 25 Forces, resultant

Find the resultant in terms of components and its magnitude.

21.
$$p = \{2, 3, 0\}, q = \{0, 6, 1\}, u = \{2, 0, -4\}$$

res =
$$\{2 + 0 + 2, 3 + 6 + 0, 0 + 1 - 4\}$$

$${4, 9, -3}$$

Norm[res]

$$\sqrt{106}$$

e2 = RowReduce[matt]

$$\{\{1, 0, 0\}, \{0, 1, 0\}, \{0, 0, 1\}\}$$

Above: the reduced echelon form says that the three vectors are linearly independent. Therefore there is no possibility of finding factors which express one in terms of the other two.

23.
$$u = \{18, -1, 0\}, v = \left\{\frac{1}{2}, 0, \frac{4}{3}\right\}, w = \left\{-\frac{17}{2}, 1, \frac{11}{3}\right\}$$

res =
$$\left\{8 + \frac{1}{2} - \frac{17}{2}, -1 + 0 + 1, 0 + \frac{4}{3} + \frac{11}{3}\right\}$$

Norm[res]

5

$$mat = \begin{pmatrix} 8 & -1 & 0 \\ \frac{1}{2} & 0 & \frac{4}{3} \\ -\frac{17}{2} & 1 & \frac{11}{3} \end{pmatrix}$$

$$\left\{ \{8, -1, 0\}, \left\{ \frac{1}{2}, 0, \frac{4}{3} \right\}, \left\{ -\frac{17}{2}, 1, \frac{11}{3} \right\} \right\}$$

e1 = RowReduce[mat]

$$\{\{1, 0, 0\}, \{0, 1, 0\}, \{0, 0, 1\}\}$$

Above: the reduced echelon form says that the three vectors are linearly independent. Therefore there is no possibility of finding factors which express one in terms of the other two.

25.
$$u = \{3, 1, -6\}, v = \{0, 2, 5\}, w = \{3, -1, -13\}$$

res =
$$\{3 + 0 + 3, 1 + 2 - 1, -6 + 5 - 13\}$$

$$\{6, 2, -14\}$$

Norm[res]

$$2\sqrt{59}$$

mattt =
$$\begin{pmatrix} 3 & 1 & -6 \\ 0 & 2 & 5 \\ 3 & -1 & -13 \end{pmatrix}$$
 {{3, 1, -6}, {0, 2, 5}, {3, -1, -13}}

RowReduce[mattt]

$$\{\{1, 0, 0\}, \{0, 1, 0\}, \{0, 0, 1\}\}$$

Above: for this one, the text says the result is 2u. I don't think that is a correct statement. In fact, the reduced echelon form says that the three vectors are linearly independent. Therefore is it not doubtful that I can find factors which express one in terms of the other two?

26 - 37 Forces, velocities

27. Find **p** such that **u**, **v**, **w** in problem 23 and **p** are in equilibrium.

From problem 37, it is understood that vectors, considered as forces, are in equilibrium when they form a 'force polygon.' This polygon will have to be 4-sided. From the s.m., I find that "... "Equilibrium" means that the resultant of the given forces is the zero vector." Meaning I need to find **p** such that $\mathbf{u} + \mathbf{v} + \mathbf{w} + \mathbf{p} = 0$.

Clear["Global`*"]

uu = {8, -1, 0}; vv =
$$\left\{\frac{1}{2}, 0, \frac{4}{3}\right\}$$
; ww = $\left\{-\frac{17}{2}, 1, \frac{11}{3}\right\}$ $\left\{-\frac{17}{2}, 1, \frac{11}{3}\right\}$

pp = -(uu + vv + ww)

$$\{0, 0, -5\}$$

29. Restricted resultant. Find all v such that the resultant of v, p, q, u with p, q, u as in problem 21 is parallel to the xy-plane.

The resultant vector in problem 21 was $\{4, 9, -3\}$. So any vector of the form $\{x, y, -3\}$ will be parallel to the xy-plane when added to the resultant of problem 21.

31. For what k is the resultant of $\{2, 0, -7\}$, $\{1, 2, -3\}$, and $\{0, 3, k\}$ parallel to the xyplane?

res1 =
$$\{2 + 1, 0 + 2, -3 - 7\}$$

 $\{3, 2, -10\}$

k = 10

10

The green cells above match the answers in the text.

32. If $|\mathbf{p}| = 6$ and $|\mathbf{q}| = 4$, what can you say about the magnitude and direction of the resultant? Can you think of an application to robotics?

33. Same question as in problem 32 if $|\mathbf{p}| = 9$, $|\mathbf{q}| = 6$, $|\mathbf{u}| = 3$.

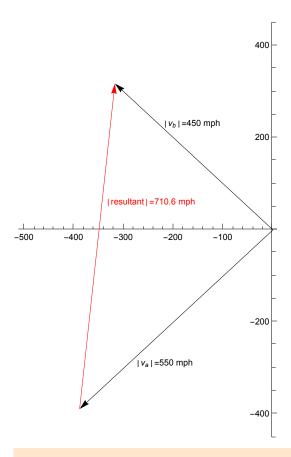

Comprising three cloud spheres. Any resulting magnitude greater than or equal to zero and

less than or equal to 18. Any octant.

34. Relative velocity. If airplanes *A* and *B* are moving southwest with speeds $|v_A| = 550$ mph, and northwest with speed $|v_B| = 450$ mph, respectively, what is the relative velocity $\mathbf{v} = \mathbf{v}_B - \mathbf{v}_A$ of B with respect to A?

```
Clear["Global`*"]
N[Solve[2 aa^2 = 550^2], 4]
\{\{aa \rightarrow -388.9\}, \{aa \rightarrow 388.9\}\}
aavec = \{-388.9, -388.9\}
{-388.9, -388.9}
N[Solve[2bb^2 = 450^2], 4]
\{\{bb \rightarrow -318.2\}, \{bb \rightarrow 318.2\}\}
bbvec = \{-318.2, 318.2\}
{-318.2, 318.2}
bbvec - aavec
{70.7, 707.1}
Norm[bbvec - aavec]
710.626
```

The relative velocity of bbvec with respect to aavec is 70.7 mph east, 707.1 mph north.

35. Same question as in problem 34 for two ships moving northeast with speed $|v_A|$ = 22 knots and west with speed $|v_B| = 19$ knots.

```
Clear["Global`*"]
N[Solve[2 as^2 = 22^2], 4]
\{\{as \rightarrow -15.56\}, \{as \rightarrow 15.56\}\}
asvec = \{15.56, 15.56\}
{15.56, 15.56}
N[Solve[bs^2 = 19^2], 4]
\{\{bs \rightarrow -19.00\}, \{bs \rightarrow 19.00\}\}
bsvec = \{-19, 0\}
 {-19, 0}
```

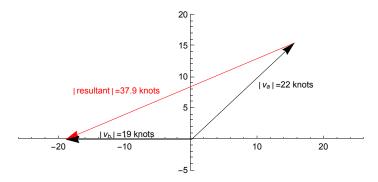

The problem doesn't say what the perspective is, let's say I want velocity of ship b with respect to ship a.

resulta = bsvec - asvec

The relative velocity of ship b with respect to ship a is 34.6 knots west, 15.6 knots south.

Norm[resulta]

37.9013

$$N[\{-19-22/\sqrt{2}, -22/\sqrt{2}\}]$$
 {-34.5563, -15.5563}

The green cells above match the answers in the text.
