Mathematica solves the system, but to knock the solutions into a framework which can be directly compared with the text answer, some wrangling, rearranging, and substituting must be done.

1. Above: Referring to green cells top to bottom, the function expressions match those of the text, y1, y2, y3, respectively. The constant coefficients were substituted as required to match those of the text; the three Solve jobs just above (pink cells) verify the coefficient assignment system as consistent and equivalent to the text.
